

Riley Leong

(925) 786-2106 | San Francisco, CA | rileyleong24@g.ucla.edu | [linkedin.com/in/riley-leong](https://www.linkedin.com/in/riley-leong)

EDUCATION

University of California, Los Angeles (UCLA)

Expected Graduation: June 2026

Computational Mathematics B.S, Minor in Data Science Engineering

- GPA: 3.7 / 4.0
- Relevant Coursework: Data Structures and Algorithms, Software Construction, Database Management, Computer Architecture, Deep Learning, Computer Vision, Statistical Programming, Probability

SKILLS

Languages & Frameworks: Python, Java, SQL, JavaScript, TypeScript, React, HTML, C++, R

Tools: AWS, Git, Snowflake, Azure, Kafka, Kubernetes, Docker, Tableau, MongoDB, Angular, Node.js, Jira

Domains: Object-Oriented Programming, Cloud Data Engineering, ELT Development, SQL/NoSQL, A/B testing, CI/CD

WORK EXPERIENCE

Fidelity Investments

May 2025 - August 2025

Software Engineer Intern - Data

Durham, NC

- Engineered a full-stack AI search tool with Python, Angular, and AWS MemoryDB, processing 1M+ internal chat messages and enabling LLM-powered Q&A via vector search, reducing internal production issue query time by 23%
- Streamlined logic across 5+ control tables to support a Kafka-driven UI that displays filtered changes from 10M+ records
- Built a scalable data quality monitoring system with Python and GX, validating datasets across 3 ETL pipelines

OPN Healthcare

October 2024 - January 2025

Product Management Intern

Los Angeles, CA

- Built a cost modeling tool in Java for oncology regimens, aggregating NCCN clinical guidelines and proprietary data improving cost estimation accuracy by 40% across 3,000+ patient records and saving patients \$100,000+
- Developed KPI dashboards combining sales, traffic, and patient data to drive \$2M+ reallocation across 9 patient centers
- Directed A/B testing with geographical data to allocate 25% of patients to closer facilities raising capacity utilization 18%

First American

June 2024 - September 2024

Data Science Intern

Santa Ana, CA

- Engineered a report archive system with a TypeScript frontend and jQuery connected to a C# and SQL Server backend
- Developed Python scripts to validate optical character recognition (OCR) processes with Great Expectations library reducing a proprietary model's word error rate by 6%, optimizing manual data validation needs
- Refactored stored procedures in SQL Server and optimized R scripts to reduce flagship database's daily batch job by 14%

PROJECTS

Concept Mapper | TypeScript, React, Vite, Supabase

January 2025 - June 2025

[*AI-powered Product Management Software*](#)

San Francisco, CA

- Launched an AI-powered contextual mapping software to 1,000+ users across universities and engineering teams to support learning and faster on-boarding for new hires
- Developed full-stack product with TypeScript, React, and Supabase supporting 50,000+ interconnected knowledge nodes
- Architected a scalable relational DB to have semantic graph structure for embedding generation, powering AI suggestions

UCLA Assistant | Python, PRAW, OpenAI API, CRON

March 2024 - June 2024

Reddit FAQ Bot

Remote

- Developed a UCLA subreddit bot with Python and OpenAI API that automatically answers admission and move-in FAQ
- Automated response scheduling with APScheduler/cron jobs reducing average reply time from 30+ mins to 20 seconds
- Streamlined content moderation by designing the logging + error handling pipeline, implementing privacy solutions
